

SCAMLEDGER

FOUNDER DECLARATION & DEVELOPMENT RECORD

Document Version: 1.0

Project: ScamLedger Multi-Chain Token Launchpad

Classification: Confidential – Founder/Development Record

1. PURPOSE

This declaration accompanies the ScamLedger Founder IP & Invention Record and documents the existence and development of the concept as of the date stated below. It is maintained as part of a version-controlled development record.

2. RECORDED CONCEPT

The recorded ScamLedger concept concerns a proposed multi-chain token launchpad with a time-based on-chain protection mechanism during the first 24 hours after token launch. The current working concept includes a first-hour cumulative sale-value limitation, followed by fixed hourly percentage-based selling allowances, with protection intended to follow the protected token position through transfers rather than reset solely because tokens move between wallets.

3. CURRENT WORKING PARAMETERS

Protected period: 24 hours from official launch time.

Phase 1: first hour; current working parameter of 5× qualifying investment as the maximum cumulative qualifying sale value.

Phase 2: following 23 hours; current working parameter of 25% of eligible/current protected holdings at the beginning of each fixed hourly window.

Transfer principle: transfer should not reset protection; associated protection state is intended to move proportionally with the protected position.

After 24 hours: initial protection is intended to expire.

4. DEVELOPMENT STATUS

This is a concept / pre-prototype record. Technical implementation, mathematical specification, security analysis, economic modeling, patentability, inventorship, and legal ownership remain subject to further review and development.

5. FOUNDER DECLARATION

I declare that I am maintaining this document as a contemporaneous record of the ScamLedger concept and its development history. I understand that this declaration and the associated repository record do not, by themselves, guarantee patent rights, patentability, copyright ownership, or other intellectual-property rights.
